As an intermediate-term swing trader (hold time = one week to a month or so), my profitability does NOT depend upon me being right on trade picks, but rather depends upon my management of:

- Risk
- Ongoing trades
- Emotions
- Process

1   25  

FactorMembers  @factor_members · Jul 5

There is a huge amount of freedom/liberation from understand with heart/soul/mind that my profitability does not depend upon me being "right"

And that getting stopped out of lots of trades for small losses is part of the calculus for long-term success

FactorMembers  @factor_members · Jul 5

If you scroll through the charts of your list of markets and do not find a good possible trade....
that is a really good sign....
It shows that you are becoming more selective.
It is a bad sign if you scroll through charts to "find a trade"

FactorMembers @factor_members · Jul 5

Classical charting is based on premise that history tends to repeat itself

Trading Ultra ETFs (2X, 3X) is NOT a bet on price direction but a bet on the immediacy of price volatility

FactorMembers @factor_members · Jul 6

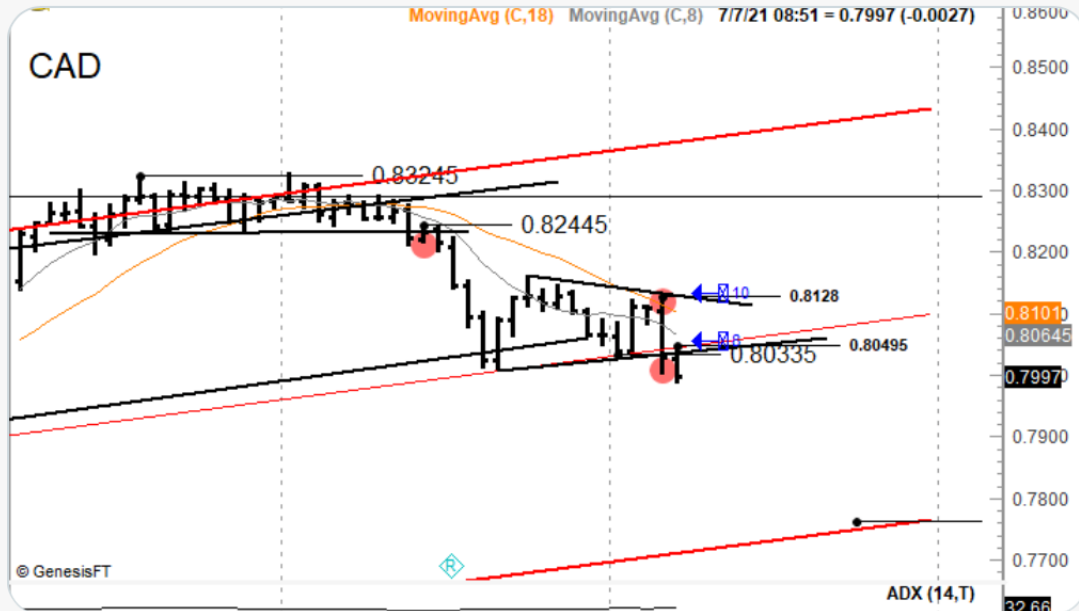

A general rule in the grain business is to be short around Jul 4 if there is moisture in most of the Corn Belt. [\\$ZC_F](#)

FactorMembers @factor_members · Jul 7

Trade management. \$CAD provided a continuation sell signal on Tuesday. Wednesday's light retest and now new lows offers opportunity to lower stops on pyramid short position to Wed high. Tuesday's high is risk point on initial position (from Jun 15)

...

1/2

You raise many outstanding points in this dilemma. Some thoughts:

1. Discretionary traders more subject to coulda/woulda/shoulda thinking
2. Review should be on process, not outcome of individual trades
3. Agility can be built into rules and need not be "impromptu"

Dave A @Dadutrades · Jul 11

Replying to @Dadutrades and @factor_members

The concern here is not for me whether the stock rises or falls after I exited in "reaction", but rather how I breach my own standard of not making impromptu decisions. There's a contradiction between "be agile" vs "sit tight"

 14

FactorMembers  @factor_members · Jul 11

...

2/2

4. "Sit tight" vs "agility" in a rules-based process could simply be fewer rules requiring a change in exit tactics
5. For me, "sitting tight" means limiting order entry to once per day (no orders during trading day) - living with the orders entered prior to trading day

 1

 9

FactorMembers  @factor_members · Jul 11

...

6. I am quite disciplined to limit my trades to only those orders entered prior to trading day
7. I do wrestle with concept of whether my rules should lengthen my hold time in profitable trades
8. Use existing rules with daily chart for 50% of trade and weekly chart for other 50%

FactorMembers  @factor_members · Jul 13

Note: My orders are entered prior to daytime trading hours (about 5 AM for me)

I avoid entering an order in a possible trade I see during the trading day

Rather, if interested I wait to enter an order the next day

I maintain this practice as way to restrict FOMO

FactorMembers  @factor_members · Jul 22

In a nutshell, swing trading can be defined as follows:

1. Trading for a sustained thrust in an expected direction
2. Cutting the trade quickly if the thrust does not occur
3. Taking profits at a predetermined target
4. Exiting a trade when the thrust stalls

FactorMembers  @factor_members · Jul 22

My perspective on trading:

Do not expect to catch every move (this way FOMO does become a big problem)

Do not expect to catch bottoms and tops

Do not become obsessed over selected markets

Be willing to trade many markets

Avoid big losses

Expect to leave money on the table

FactorMembers  @factor_members · Jul 24

Several other items:

- Avoid monitoring markets intraday
- Learn and practice self-forgiveness
- Avoid "coulda-woulda-shoulda" regrets

FactorMembers  @factor_members · Jul 30

What do I do when I lose 135 BPs on a trade for which I initially risked 60 BPs?

Get up, dust myself off and be prepared for my next signal.
