Gold broke out today. The confusing part of Gold charts comes from carrying charges of deferred futures contracts. Thus the big interest rates we have has skewed the charts toward the nearby contract. GLD is my main position now as of today. I bought GLD because it gives me more staying power than futures. I bought GLD as a weekly chart trade and as the Position Unit for Factor Prop. Stops are below Friday's low. For the Prop Account Trading Unit I bought the June futures contract with stops below 2100.
